

CH: Graham Scan: Presorting

CH: Graham Scan: Scan

```

while( ! T.empty() )
    // test type of current turn
    toLeft( U, V, W ) ?

    // step forward at a left turn
    S.push( T.pop() ) :

    // otherwise, backtrack
    S.pop(); //what if S "empty"
    
```

PT: Art Gallery Theorem

[Art Gallery Theorem, V. Chvatal, 1975]

$\lceil n/3 \rceil$ guards are **occasionally necessary** and
always sufficient to cover an n -gon
